**Subject:** Examination of histology slides and reports

Prof Lucas

I trust you are well and enjoying the good weather. I confirm that PIRC Investigators will deliver the histology slides to you on 4 June and understand that they have made contact with you regarding this. I will forward a total of 4 reports for your consideration in relation to this case separately. These have to be sent individually due to size constraints and they are password protected-instructions on how to open them will be attached. I would be most grateful if you could acknowledge safe receipt and ensure that the contents are kept secure.

I would be grateful if you could address the following areas in your considerations which may lead to the instruction of a formal report

- To comment on the supplementary report by Liz Soilleux and in particular her conclusions on the cause and mechanism of death and the significance of sickle cell carrier status
- Whether the apparent sickling of cells occurred ante or post mortem
- From your own experience conducting autopsies in persons who are sickle cell carriers the extent to which sickling of cells is noted generally
- Whether it is possible or likely that sickle cell carrier status contributed to the cause and mechanism of death in this case having regard to all of the relevant factors set out in the reports

I trust this is of assistance to you but if you require anything further please do not hesitate to get in touch.

Kind regards

Les
